Functions in JavaScript

A function in Js is a block of code designed to perform a particular task.

Syntax:

function myFunc() {

        Code//
}

function nameofFunc(parameter1 , parameter 2) {

        Code//
}

To invoke a function function name with the suitable parameters must be written in the code
For ex -
 nameofFunc(4 , 5)

* function invocation is a way to use the code inside the function
* A function can also return a value , The value is returned back to the caller.
